WATER TESTING PERFORMED IN 2019

Warren County  
Water District

[WARRENWATER.COM](http://WARRENWATER.COM)

PWSID KY 1140487

## WHERE DOES MY WATER COME FROM?

Warren County Water District purchases the water delivered to its customers from Bowling Green Municipal Utilities (BGMU). BGMU uses the Big Barren River, a surface water source, as its source of raw water. The Big Barren River flows out of Barren River Reservoir, a flood control lake designed to help prevent flooding in the populated areas west of Allen and Barren Counties. Drakes Creek joins Big Barren River approximately three miles above BGMU's raw water intake. Drakes Creek is fed by Tammel Creek and flows north out of Simpson County, Kentucky. These three surface water bodies are the sources of water that are treated by BGMU.

The Safe Drinking Water Act, amended in 1996, requires Community Public Water Systems to prepare a source water assessment report. This report includes a Source Water Assessment Plan (SWAP) that summarizes our susceptibility to contamination. An analysis indicates that BGMU's system susceptibility to contamination is generally moderate. Areas of concern include potential contaminant sources such as bridges, underground storage tanks, an inactive landfill, oil and gas wells, a KPDES permitted discharger, and agricultural chemical use in the areas near and surrounding the raw water intake.

The final source water assessment plan with complete information on BGMU's system susceptibility to potential sources of contamination is available for review at our office or the Barren River Area Development District Office located at 177 Graham Avenue in Bowling Green, Kentucky.

Our goal is to provide the best water and customer service to Warren County residents. Our customers

are our top priority and an important part of our everyday efforts. We continually look for ways to stay involved in our community and to develop ways to educate customers on water quality. Our website, [warrenwater.com](http://warrenwater.com), provides customers access to water quality information and facts about their water utility. Also, general brochures, Consumer Confidence Reports (CCRs), and various other Warren Water publications are available for customer service and educational purposes.

## WATER QUALITY

### Delivering Quality and Commitment in Every Drop!

Warren Water continually performs numerous tests to ensure your drinking water is safe. Warren Water tests the purity of the water over 1,560,000 times a year to ensure the safety of your drinking water. In 2019, the water was tested for over 100 regulated contaminants, and met or exceeded all state and federal quality standards.

**\*\*Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects may be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).\*\***

The sources of drinking water, both tap water and bottled water, include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and may pick up substances resulting from the presence of animals or from human activity. Contaminants

that may be present in source water include: Microbial contaminants, such as viruses and bacteria, (sewage plants, septic systems, livestock operations, or wildlife). Inorganic contaminants, such as salts and metals, (naturally occurring or from stormwater runoff, wastewater discharges, oil and gas production, mining, or farming). Pesticides and herbicides, (stormwater runoff, agriculture or residential uses). Organic chemical contaminants, including synthetic and volatile organic chemicals, (by-products of industrial processes and petroleum production, or from gas stations, stormwater runoff, or septic systems). Radioactive contaminants, (naturally occurring or from oil and gas production or mining activities). In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water to provide the same protection for public health.

## SPECIAL HEALTH INFORMATION

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Warren Water is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. The good news is that of all the lead testing performed by Warren Water, there has never been a single sample that exceeded EPA's action level. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline 800-426-4791.

# 2019 TEST RESULTS

The data presented in this report are from the most recent testing done in accordance with administrative regulations in 401 KAR Chapter 8. As authorized and approved by EPA, the State has reduced monitoring requirements for certain contaminants to less often than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data in this table, though representative, may be more than one year old.

To understand the possible health effects described for many regulated contaminants, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

## Regulated Contaminant Test Results

Substance	Compliance Achieved	Report Level	Range of Detection	MCL	MCLG	Tested by	Likely Source
Turbidity (NTU) <sup>1</sup>	YES	0.093	-	-	-	BGMU	Soil Runoff
Barium (ppm)	YES	0.024	0.024	2	2	BGMU	Drilling wastes, metal refineries, erosion of natural deposits
Fluoride (ppm)	YES	0.8	0.8	4	4	BGMU	Water additive which promotes strong teeth
Nitrate (ppm)	YES	2.2	2.2	10	10	BGMU	Fertilizer runoff, leaching from septic tanks, erosion of natural deposits
Total Organic Carbon (ppm) (Measured as ppm, but reported as a ratio)	YES	1.5 (lowest avg.)	1.10 to 2.12 (monthly ratios)	TT <sup>2</sup>	N/A	BGMU	Naturally present in the environment
Copper (ppm) (Sites exceeding action level: 0)	YES	0.0209 (90th percentile)	0 to 0.055	AL=1.3	1.3	WCWD (2018)	Corrosion of household plumbing systems
Lead (ppb) (Sites exceeding action level: 0)	YES	0 (90th percentile)	0 to 9	AL=15	0	WCWD (2018)	Corrosion of household plumbing systems
Chlorine (ppm) (Reported as highest avg.)	YES	1.14	0.1 to 1.6	MRDL=4	MRDLG=4	BGMU	Water additive used to control microbes
Haloacetic Acids (ppb) (Reported as highest locational running average)	YES	51	14.1 to 59.1	60	N/A	WCWD	By-product of drinking water chlorination
Total Trihalomethanes (ppb) (Reported as highest locational running average)	YES	46	12.8 to 76.3	80	N/A	WCWD	By-product of drinking water chlorination

<sup>1</sup> No more than 1 NTU, less than 0.3 NTU in 95% of representative samples of filtered water monthly. Lowest monthly percentage was 100%.

<sup>2</sup> Monthly ratio is the %TOC removal achieved to the %TOC removal required. Annual average must be 1.00 or greater for compliance.

## Unregulated Contaminant Test Results

Substance	Average	Range of Detection	Tested by	
Manganese (ppb)	3.74	0.518 to 9.72	WCWD	<p>Your drinking water has been sampled for a series of unregulated contaminants. Unregulated contaminants are those that EPA has not established drinking water standards. There are no MCLs and therefore no violations if found. The purpose of monitoring for these contaminants is to help EPA determine where the contaminants occur and whether they should have a standard. As our customers, you have a right to know that these data are available. If you are interested in examining the results, please contact our office during normal business hours.</p>
HAA5 (ppb)	37.8	14.76 to 59.0	WCWD	
HAA6Br (ppb)	5.92	2.76 to 9.38	WCWD	
HAA9 (ppb)	43.57	17.65 to 65.0	WCWD	
o-toluidine (ppb)	0.007	0 to 0.0219	WCWD	

Warren County Water District failed to include some mandatory language in last year's WQR. We have included the required language this year and will include all mandatory language in the future. The omitted language is bordered with \*\* on the previous page (2020-9950109).

### Terms to know when reading the water test results:

#### AL (ACTION LEVEL)

The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system shall follow.

#### MCL (MAXIMUM CONTAMINANT LEVEL)

The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

#### MCLG (MAXIMUM CONTAMINANT LEVEL GOAL)

The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

#### MRDL (MAXIMUM RESIDUAL DISINFECTANT LEVEL)

The highest level of disinfectant allowed in drinking water. There is convincing evidence that addition of disinfectant is necessary for control of microbial contaminants.

#### MRDLG (MAXIMUM RESIDUAL DISINFECTANT LEVEL GOAL)

The highest level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

#### NTU (NEPHELOMETRIC TURBIDITY UNIT)

A measure of the clarity of water. Turbidity is monitored because it is a good indicator of the effectiveness of the filtration system.

#### N/A (NOT APPLICABLE)

Does not apply.

#### PPM (PARTS PER MILLION)

One part per million corresponds to one minute in two years, or a single penny in \$10,000.

#### PPB (PARTS PER BILLION)

One part per billion corresponds to one minute in 2,000 years or a single penny in \$10,000,000.

#### TT (TREATMENT TECHNIQUE)

A required process intended to reduce the level of a contaminant in drinking water.

# As Warren County Grows, We Continue to Grow with it.

We have been and will continue to upgrade several water pumping stations to keep up with the system demands. Pump stations on Nashville Road and Buchanon Park have been recently upgraded. Construction is ready to begin on upgrades for pumping stations in the Louisville Road and Greenwood areas. The new Hilltop Trail tank will be completed in the next several months along with the associated pump station. Crews continue to replace lines that are approaching the end of their useful service life.

## The Importance of Clean, Safe Drinking Water

The coronavirus pandemic has reinforced that our disinfection process is effective in neutralizing COVID-19. Based on current evidence, the risk to water supplies is low. Americans can continue to use and drink water from their tap as usual. At Warren Water we are taking proactive measures to ensure we can continue to provide our customers with reliable water and wastewater services throughout this crisis. Health officials say the provision of safe water, sanitation and hygienic conditions are essential to protecting human health during all infectious disease outbreaks. Reliable water service used for hygiene, hydration and cooking is critical to our health and safety every day, however, is especially important during a public health emergency. Health organizations recommend that normal hygienic practices, including handwashing for 20 seconds, may play an important role in slowing the spread of the coronavirus.

## A Reminder to Complete your Census.

The U.S. constitution mandates that a census of the population be conducted once every 10 years. Responding to the census is not only your civic duty; it also affects the amount of funding your community receives, how your community plans for the future, and your representation in government. Specifically, data from the 2020 Census are used to:

- Ensure public services and funding for schools, hospitals, and fire departments.
- Plan new homes and businesses and improve neighborhoods.
- Determine how many seats your state is allocated in the House of Representatives.

The 2020 count will be the first to encourage all U.S. households to respond online. However, paper forms will still be available and residents will also be able to complete their census by phone.

### GET INVOLVED

We welcome your comments and the opportunity to serve you. Warren Water Board Meetings are open to the public and are held at 4 PM on the fourth Tuesday of every month at the Warren Water office located at 523 US 31 W Bypass, Bowling Green, KY. Please call us at 270-842-0052.

### THE WARREN WATER BOARD OF COMMISSIONERS

Glen Johnson - Chairman  
Thomas A. Donnelly - Vice Chairman  
R. Harvey Johnston, III - Secretary  
Joe W. Taylor, Sr. - Treasurer  
Dion Houchins

### ATTORNEY

Franklin Hampton Moore, Jr.

### WARREN WATER STAFF

John Dix - General Manager  
Ryan Leisey - Manager of Engineering & Construction  
BJ Malone - Manager of IT/GIS  
Tim Minnicks - Manager of Construction  
Jeff Peeples - Manager of Finance & Administration  
Alex Renick - Human Resources & Communications Administrator  
Bryan Tillery - Manager of Water Quality/Operations
